The **Hybrid Gaiter** protects the heel bulb and sides of the coronet band. It keeps the hoof cool when riding in hot conditions and eliminates the build up of sand.

To keep the **Hybrid Gaiter** secure inside your Scoots, use the glue provided.

HOW TO GLUE THE HYBRID GAITER

1
Place the Gaiter inside the Scoot with the long end facing downwards.

2
Squeeze the glue along the top and bottom edge of the Scoot and hold firmly until the glue sets.

3
If riding in extreme conditions, place a small drop of glue between the rear tabs to ensure the velcro stays in place.

4
When the gaiters have reached the end of their working life, replace with a new set.
